PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience in PHP, Node.js, Python, MySQL, HTML, CSS, and JavaScript, with strong experience in application development, troubleshooting, and team collaboration. Currently transitioning into AWS DevOps and Cloud Engineering, with hands-on experience in AWS Cloud Infrastructure, Linux Administration, CI/CD Automation, Docker, Kubernetes, Terraform, and AWS CLI. Experienced in deploying scalable cloud-native applications, automating delivery pipelines using Jenkins and GitHub Actions, and monitoring systems using CloudWatch, Prometheus, and Grafana. Seeking an AWS DevOps / Cloud Engineer opportunity where I can leverage my development background and growing expertise in cloud infrastructure, automation, deployment, and DevOps practices.

TECHNICAL SKILLS

Cloud & Infrastructure	AWS (EC2, S3, CloudFront, VPC, ALB/NLB, Auto Scaling, CloudWatch, IAM, Aurora MySQL / RDS)
Networking & Security	VPC Architecture, Subnets, Route Tables, NAT/Internet Gateways, Security Groups, Load Balancing, DNS, IAM Policies
Containers & Orchestration	Docker, AWS EKS (Deployment, Scaling, Networking, Upgrades, Troubleshooting)
DevOps & CI/CD	Jenkins, GitHub Actions, Version Control (Git, GitHub)
Infrastructure as Code	Terraform (IaC Concepts & Best Practices)
Web & App Servers	Nginx, Apache Tomcat, Apache
Observability & Telemetry	AWS CloudWatch Metrics & Logs, Prometheus, Grafana, ELK/Splunk Dashboards, System Log Troubleshooting
Automation & Storage	N8N Automation, LVM (Logical Volume Manager)
Programming & Scripting	Python, Shell Scripting (Bash), JavaScript, Node.js, PHP
Web & Database	MySQL, HTML5, CSS3, REST APIs
Operating Systems	Linux (Ubuntu), Windows Server
Methodologies & Tools	Jira, Confluence, System Monitoring, Debugging & Troubleshooting, Agile/Scrum
Soft Skills & Productivity	Problem Solving, Team Collaboration, Communication, Quick Learner, AI-Assisted Problem Solving

PROFESSIONAL EXPERIENCE

Software Engineer — Feb 2022 – Jun 2026

Four Pillars Infotech India Pvt. Ltd. — Mumbai, India

- Designed, developed, and maintained scalable web applications using PHP, JavaScript, HTML5, CSS3, and MySQL, customizing solutions to meet client-specific requirements.
- Contributed to modernizing legacy backend and frontend systems by driving the migration from PHP to Node.js and React.
- Developed Python-based client reporting modules and data aggregation pipelines to streamline automated reporting workflows.
- Architected and optimized MySQL databases to ensure high data integrity, secure integration, and fast query execution.
- Facilitated client requirement gathering, provided interactive application previews, incorporated feedback, and directly resolved technical queries.
- Proactively resolved technical bottlenecks, debugged complex codebases and monitored application health, performance, and infrastructure metrics to identify and implement performance improvements.
- Directly collaborated with clients to address application queries, resolve technical issues, and communicate progress updates.
- Utilized Jira and Confluence to manage daily task updates, maintain technical documentation, track sprints, and streamline team workflows.

Associate Software Engineer — Feb 2021 – Feb 2022

99 Ideas Infotech Services LLP — Mumbai, India

- Contributed to active software development workflows by modifying, updating, and optimizing existing PHP-based web applications.
- Handled backend data operations, writing and executing MySQL queries for data retrieval, updates, and database maintenance.
- Collaborated directly with clients to understand feedback, analyze functional requirements, and resolve module-specific technical queries effectively.
- Participated actively in team-based coding sprints, following systematic version control and professional software delivery standards.
- Translated client needs into technical solutions, delivering clear status updates and reliable bug fixes within project deadlines.

KEY PROJECTS

3-Tier Web Architecture on AWS

- Architected and deployed a highly available three-tier web application on AWS, leveraging a Multi-AZ architecture to ensure 99.9% uptime, fault tolerance, and scalability.
- Designed and implemented a secure VPC network architecture with public, private, and database subnets, enabling strong network segmentation and enhanced security.
- Configured 5 Security Groups, 3 Route Tables, NAT Gateways, and Internet Gateways to provide controlled access, secure communication, and optimized traffic flow across application tiers.
- Implemented IAM roles and least-privilege access policies, supporting secure operations for 10+ development, testing, and operations team members.
- Enhanced application performance and availability by deploying AWS Auto Scaling Groups and Application Load Balancers (ALBs) for dynamic scaling and efficient traffic distribution.
- Provisioned Amazon Aurora MySQL (Multi-AZ) with automated backups, failover capabilities, and disaster recovery mechanisms to ensure high database reliability and data protection.
- Reduced overall AWS infrastructure costs by 60–70% through instance rightsizing, automated resource scheduling, and optimized storage lifecycle policies.

VPC Peering

- Implemented VPC peering to enable seamless communication and improve resource accessibility across cloud environments.
- Configured route tables, internet gateways, and subnets to optimize routing and strengthen network infrastructure.
- Improved network efficiency and reduced latency through optimized routing, followed by performance monitoring and scalability improvements.

Static Website Hosting Using Amazon S3 and CloudFront

- Hosted HTML, CSS, and JavaScript files on Amazon S3 and used CloudFront for global content delivery with low latency.
- Configured S3 Bucket Policies and IAM roles for secure and controlled access to hosted content.
- Integrated SSL/TLS with CloudFront to provide secure HTTPS access and data encryption.

Load Balancer Configuration for Web Application

- Implemented Elastic Load Balancer with an Auto-Scaling Group to improve application scalability and availability.
- Configured an Application Load Balancer across multiple EC2 instances using listeners, target groups, and health checks.
- Monitored application performance and traffic patterns to optimize load-balancing configuration and user experience.

EDUCATION

B.Sc (Computer Science) **Jun 2016 – Jun 2019**
Pune University — Pune, India

CERTIFICATIONS

AWS Certified Cloud Practitioner
